

Title: Make Appointment for Hospital Management System

As a patient, I want the ability to schedule appointments through the Hospital Management System, so that I can efficiently plan my healthcare visits and receive timely medical attention.

Acceptance Criteria:

1. Appointment Scheduling:

The system should provide a user-friendly interface for selecting the desired date and time for the appointment.

2. Doctor Selection:

The system should display relevant information about each doctor, such as specialization and availability.

3. Appointment Confirmation:

Users should have the option to confirm or modify the appointment before finalizing.

4. Reminder Notifications:

The system should send appointment confirmation notifications to users via email or SMS.

5. Rescheduling and Cancellation:

The system should allow users to reschedule appointments if needed, and the user should have the option to cancel the appointment.

Success:

1. After successful doctor selection, the patient will be assigned to specific doctor.
2. After successful appointment confirmation, the patient will receive notifications about his/her appointment.
3. If the patient wants, he/she can cancel or reschedule the appointment.

Failure:

1. If there is an issue in selecting doctor, an error message will appear and try again.
2. If the patient do not receive notifications, he/she will contact the administrator.
3. If there is an error rescheduling or cancelling the appointment, troubleshoot and try again later.
